FootActive Workmate supports and re-aligns the feet and ankles

FootActive **Workmate** orthotic insoles were developed by podiatrists, especially for people who are on their feet all day, in particular those who spend long hours on hard surfaces.

FootActive **Workmate** provides both cushioning and support. The insole re-aligns the foot and ankle thereby providing overall stability and balance for knees, hips and lower back.

With less strain on the muscles and ligaments, FootActive can help prevent common work-related injuries to the feet, knees and back. Enjoy a more comfortable working day with FootActive **Workmate!**

FootActive helps relieve & prevent:

- Tired, aching feet
- Tired, aching legs
- Pain under the ball of the foot
- Knee pain
- Lower back pain

Suitable for all lace-up shoes as well as work boots.

Fitting & Care Instructions:

Please remove any existing insoles or lining from your shoes before inserting FootActive. If required, FootActive insoles can be trimmed to size with scissors at the toe end. It may take a while to get used to the arch support. Please wear FootActive for just a few hours a day, gradually increasing the hours of wear until they feel comfortable. You may clean the insoles with a warm soapy cloth. Do not soak them or put them in the washing machine or dryer.
